Budapest, 8 July 2023

To Whom It May Concern,

    I am writing this letter about Mr. Al-Hitawi Mohammed, born in Baghdad, an international student at Eötvös Loránd University who is applying for Artificial Intelligence studies. To get straight to the point, Mohammed is, without a doubt, among the best undergraduate students.

I was his supervisor for his AI Project Labs and he enrolled in one of my classes, Computational Intelligence. His performance was outstanding. Additionally, he was a discussion leader which helped alleviate some of the initial nervousness of the other students in the class. As I noted from his discussions, he is one of those students who can operate at an advanced theoretical and practical level while keeping firmly rooted in an empirical realm.

Over the current year, I have watched Mohammed's interest in Deep Learning studies blossom into a very powerful thesis topic on Hungarian handwritten recognition. For this reason, I am confident when I say he has chosen a fascinating topic for exploration. As part of his research, I believe Mohammed is a good candidate to receive a scholarship or work in industry. He has a deep and sincere interest in his work, and his work requires programming skills close to his subject.

Please contact me if you need any additional information.

Sincerely,

János Botzheim

Head of the Department of Artificial Intelligence

ELTE Faculty of Informatics
